

## BACK-END DEVELOPER INTERNSHIP

---

### ABOUT US

We are an international company that develops software for immune system monitoring. We offer standardized immune monitoring tools such as ImmunoSpot that are used worldwide for leading biotechnology research. If you are interested in the development of science and would like to participate in the development of our newest software, join our team!

### ROLES AND RESPONSIBILITIES:

- Participation in development, design, test automation and testing tasks
- Meeting both technical and consumer needs
- Developing high-performance applications by writing testable, reusable, and efficient code

### ADVANTAGES:

- Proficiency in C# and .Net Framework
- Familiarity with REST.API, WebSocket
- Routine with software product life-cycle management tools
- Knowledge of Design Patterns and Principles
- Previous experience with Version Control Systems (SVN, Git, etc.)
- Interest in science especially in the field of immunology
- Agile knowledge and mindset
- Curiosity towards new technological trends

### SKILLS REQUIRED:

- Constructive, analytic and algorithmic thinking
- Good problem-solving ability
- Open-minded personality
- Ability to work in teams and individually
- Good written and verbal communication skills
- Understand agile methodology and way of working

### WHAT WE OFFER:

- Task variety
- Cognition and application of the state-of-the-art technology
- Active participation in international software development projects
- Friendly and supportive working environment
- Possibility for career building and professional development
- Competitive salary
- Team-building events
- Recreation room and sport facilities
- Modern office close to the city center
- English training opportunity
